

## T-2 Buckeye 'Anniversary Markings'

### CZ

Od roku 1959, kdy vstoupil do služby, až do roku 2004, kdy byl North American T-2 Buckeye vyřazen z výcvikového programu, byl prvním proudovým strojem námořnictva USA, na kterém létali do výcviku zařazení letci. US Navy objednalo tento letoun v roce 1956, s tím, že v rámci několikastupňového výcviku bude zařazen za vrtulový T-28 Trojan. Sloužil k seznámení s proudovou technikou před přechodem na bojové stroje.

První prototyp označený YT-2J-1 vzlétl 31. 1. 1958. První verze T2J-1 byla jednomotorová. Poháněl ji motor J34-WE-48. Této verze bylo postaveno 201 kusů, od roku 1962 byla v novém systému označování přeznačena na T-2A.

US Navy požadovalo úpravu na dvumotorový stroj s větší bezpečností. Proto North American připravil a zavedl do výroby verzi T-2B se dvěma motory J60-P-4. Postaveno bylo 97 kusů, poté výroba přešla na verzi T-2C s motory J85-GE-4.

Té bylo postaveno 231 kusů. Bojové jméno společné pro všechny verze bylo Buckeye - jírovec neboli kaštan.

T-2 Byly vyráběny v Columbusu v Ohiu a jírovec je státním stromem státu Ohio. Na konci své služby u US Navy byla část strojů upravena na terčové a označena DT-2B nebo DT-2C.

Kromě toho, že T-2 sloužily skoro padesát let k výcviku letců US Navy, byly také exportovány. Verzi označovanou T-2D odebralo letectvo Venezuely, T-2E složí v Řeckém vojenském letectvu.

V USA nyní létá několik T-2 jako soukromé jety.

rozpětí: 11,6 m, délka: 11,8 m, max. rychlost v úrovni moře: 862 km/h, dolet: 1723 km, dostup: 13 045 m

### EN

North American T-2 Buckeye was the first US Navy jet trainer aircraft since 1959 when it entered service until 2004 when it was withdrawn from pilots' training program. It was ordered by the US Navy in 1956 as intermediate trainer for training conversion from T-28 Trojans. It served for jet powered aircraft familiarization prior conversion to combat aircraft.

The first prototype YT-2J-1 took off on January 1, 1958. The first version T2J-1 was powered by single J34-WE-48 jet engine. 201 machines of this version were produced and since 1962 when new designation system was introduced the aircraft was re-designated to T-2A.

For better safety the US Navy demanded the aircraft to be powered by two jet engines. Therefore North American designed and introduced T-2B version powered by two J60-P-4 jet engines. 97 machines of this version were produced and then the production switched to T-2C version powered by two J85-GE-4 jet engines.

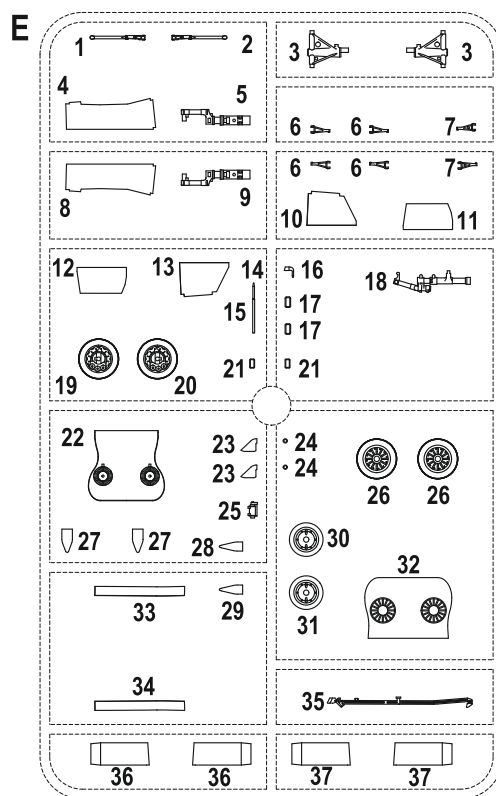

T-2C was produced in 231 pieces. The combat name common to all versions was Buckeye - Ohio chestnut tree. T-2s were produced in Columbus Ohio and the buckeye is the Ohio's state tree. At the end of its career some US Navy machines were converted for target towing and re-designated DT-2B or DT-2C.

Except of the fact that T-2s served for training almost half a century they were also exported. T-2D was purchased by the Venezuelan Air Force; T-2E still serves with the Hellenic Air Force.

Several T-2s are in private hands in the USA.

Wingspan: 11.6 m, Length: 11.8 m, Max. Speed at sea level: 862 km/h, Range: 1,723 km,  
Service Ceiling: 13,045 m.
